Name: D VIJAY GANESH

Project Title: Phishing URL Detection Using Machine Learning

Dataset Description: This dataset contains URL-based features that can be used to identify phishing websites. It includes different characteristics of URLs along with labels showing whether a URL is legitimate or phishing. It can be used for machine learning classification and basic cybersecurity analysis.

Data Dictionary:
Shape of the Data: 7658 × 14
No of Rows: 7658
No of Columns: 14
Total Storage Size: 788.99 KB

Features (Variable)	**Type Variable**	**Description**
URL	Text	The URL being checked for phishing
Label	Categorical	Shows whether the URL is phishing or not
URLlength	Numerical	Total length of the URL
DomainLength	Numerical	Length of the domain name
IsDomainIP	Binary	Shows whether an IP address is used as the domain
TLD	Categorical	Top-level domain such as .com or .org
NoOfSubDomain	Numerical	Number of subdomains in the URL
NoOfLettersInURL	Numerical	Number of letters in the URL
NoOfDigitsInURL	Numerical	Number of digits in the URL

NoOfEqualsInURL	Numerical	Number of = symbols in the URL
NoOfQMarkInURL	Numerical	Number of ? symbols in the URL
NoOfAmpersandInURL	Numerical	Number of & symbols in the URL
SpecialCharCount	Numerical	Number of special characters in the URL
Entropy	Numerical	Shows how random it is
